Wilcom Introduces full function mini-OTDR

Laconia, NH Wilcom, a world leader in Optical Fiber Identifiers, continues its leadership role in the hand-held fiber optic test equipment arena by introducing the Fiber Ranger-3 Mini-OTDR. This low cost unit is a full-featured Mini-OTDR in a ruggedized, waterproof, handheld case. Features like a one button SCAN and high speed multiprocessing allow for simple operation. The user is able to view a trace for analysis within a second of powering on the unit.

The Fiber Ranger-3 provides a graphic representation of loss versus distance for fiber up to 64Km, at single or dual wavelengths in the Long Range Version, or up to 16Km, at single or dual wavelengths in the High Resolution Version. The High Resolution is typically better for the LAN application. Both versions are available in singlemode or multimode.

Keeping the user in mind, these units are designed for ease of operation, with features such as one button incremental zoom, and automatic incremental trace storage. Features like splice loss and real time response are ideal for monitoring while installing or repairing your fiber optic link. This is the perfect low cost solution for field-use, maintenance, and troubleshooting new or existing fiber optic networks.

Other features supported are non-volatile storage of 255 traces, RS-232 serial port for downloading trace information, 2-Point loss mode, user selectable IOR, and rechargeable NiMH cells.

For further information, please contact sales@wilcominc.com, or view our web site www.wilcominc.com, or contact your local Wilcom representative.
