Wilcom Introduces Video Inspection Probe for Optical Connectors

Laconia, NH Wilcom is pleased to announce the addition of a Video Inspection Probe to our product offering. The VIP Inspection Probe is a highly portable magnification system for inspecting the end face of a connector for debris or damage. The VIP system consists of a separate 2.5" or 3.5" color monitor and magnification options of 250x or 400x.

The VIP gives customers the ability to troubleshoot network performance issues (most commonly caused by dirty connectors) or for routine maintenance of their fiber optic connection systems.

The VIP also offers the combination of value and performance by giving the user the ability to check the quality of both the external cable connector and the connector end face while still installed inside a bulkhead. All common connector and bulkhead adapters in 2.5mm and 1.25mm are included for maximum flexibility.

- The VIP-35 kit includes a 400x probe and a 3.5 inch display.
- The VIP-25 kit includes a 250x probe and a 2.5 inch display.

Wilcom is a leading manufacturer of Telecommunications Test Equipment and Components for subscriber loops and local area networks. Since 1967 Wilcom has been offering Testing Solutions for Fiber Optic and Copper Networks as well as Line Treatment and Line Conditioning components such as the currently popular ADSL CO and ADSL CPE Splitters.
